

CAD Simulation

Simulation of proposed Wood Brothers NASCAR museum

The Wood Brothers museum model was created to help the organizers of the project communicate their collective vision for the facility. The resulting images were used at the unveiling of the project and at subsequent fundraising events. The model is highly detailed and includes extensive use of Accurender's "fractal plants," a unique method for rendering very natural looking vegetation. The simulation includes the logos of all of the team's primary sponsors. Several of the logos are "mapped" onto the flags that line the entrance.
